Directions (80-84): In the following passage, some words have been deleted. Read the passage carefully and select the most appropriate option to fill in each blank.

Popular culture often celebrates leaders who exude unshakeable confidence, mistakenly equating (1)_____ with competence. Charismatic figures who speak with unwavering certainty tend to captivate audiences, while those who acknowledge doubt are sometimes dismissed as weak or indecisive. Yet a growing body of research suggests that this perception may be fundamentally misguided.

Studies of organisational behaviour reveal that intellectually humble leaders, those willing to concede the limits of their knowledge, frequently foster more innovative and resilient teams. By openly soliciting dissenting views, such leaders create an environment in which employees feel emboldened to voice unconventional ideas without fear of (2)_____. In contrast, autocratic managers who brook no disagreement often find themselves surrounded by sycophants, insulated from the unpalatable truths essential for sound decision-making.

Humility, however, should not be conflated with (3)_____. A humble leader is not one who vacillates endlessly or abdicates responsibility; rather, it is one who weighs evidence judiciously before acting decisively. The distinction is subtle but crucial, for excessive self-effacement can be as detrimental as arrogance.

The most (4)_____ leaders, it appears, strike a delicate balance between conviction and openness. They possess the fortitude to make difficult choices while retaining the magnanimity to revise those choices when confronted with compelling new information. Such adaptability is especially invaluable in an era of rapid technological and economic flux.

Cultivating this balance is no trivial undertaking. It demands introspection, a (5)_____ for honest feedback and the courage to admit error publicly, qualities that, paradoxically, reveal genuine strength rather than weakness.
